Version 1.4

Last move retraction

In case a king is in check in the diagram, it can be very helpful to retract the last half move in all possible ways, solve all implied shorter SPGs and combine their results thereafter. By default, this is what Stelvio now does in such a case. See documentation for details.

Miscellaneous

- Some internal improvements

- One bug fixed (rare case which would have led to an internal failure if encountered - so nothing to worry about).
